2D Echocardiogram (Echo)

Patient Name: John Doe

Age/Sex: 35/M

Date: 26 April 2026

CLINICAL INDICATION: Cardiac assessment for transplant clearance.

LV SIZE & FUNCTION:

Left Ventricle is normal in size. Normal global systolic function.

LVEF (Left Ventricular Ejection Fraction) is estimated at 60%.

No regional wall motion abnormalities (RWMA) at rest.

VALVES:

Aortic Valve: Trileaflet, normal excursion. No stenosis or regurgitation.

Mitral Valve: Normal leaflets. Trace physiological regurgitation.

Tricuspid & Pulmonary Valves: Structurally normal.

CHAMBERS & PERICARDIUM:

Right Atrium and Right Ventricle are normal in size and function.

No pericardial effusion. Intact interatrial and interventricular septum.

IMPRESSION:

Normal Echocardiogram study. Normal left ventricular systolic function.

LVEF = 60%. Suitable for surgical procedures.
